Safespring SWAMID privacy policy

Policy for the management of personal information within the scope of the Identity Provider (IdP) as determined by Safespring.

The Identity Provider performs authentication at the request of a service that Safespring recognises, either via metadata provided by the SWAMID identity federation or because the service and Safespring have a specific agreement. Depending upon the type of service involved, the service's purpose, and the relationship the service has to the Safespring identity provider, one or more pieces of personal data are transferred from the customer's catalogue and authorisation system to the requesting service. This procedure follows the intent of the Swedish personal data protection legislation.

Services categorised in SWAMID's metadata with entity categories receive attributes per SWAMID's recommendations; see table on page two.

Transfer of personal data

When customers log in to this service, certain information is transferred from the identity issuer (customer login service) to ensure that the user has access to their data in the service and to provide a customised interface.

In connection with the login to this service, the following personal data is requested from the identity issuer used.

Information about users

Personal data	Purpose	Technical representation
Unique identifier	Issuer identification, normally	eduPersonPrincipleName
Entitlement	User roles	eduPersonEntitlement
Email	Add users email to user data in Compute service	mail
Name	Display the name of the user in the dashboard	displayName

In addition to direct personal data, indirect data is also transferred, which organisation the user belongs to and which identity issuer was used when logging in. In combination with the above personal data, these can be used to identify an individual uniquely.

GÉANT Data Protection Code of Conduct

This service complies with the international framework GÉANT Data Protection Code of Conduct for transferring personal data from identity issuers to the service. The framework is intended for services in Sweden, the EU, and the EEA used in research and higher education.

Find out more about the framework at Géant's website.
